

BUYING COWS?

DON'T INTRODUCE TRICHOMONIASIS TO YOUR HERD *One infected cow or bull can infect the entire herd.*

Trichomoniasis (trich), a sexually transmitted disease of cows and bulls, causes cows to abort and severely reduces calf crops.

What can I do to keep my herd trich-free?

- **Develop a preventive herd health plan with your veterinarian that includes testing, record keeping, and a vaccination schedule.**
- **Educate yourself and others about the disease.**
- **Know the breeding and calving history of your purchases.**

Visit beef.tamu.edu or www.tahc.texas.gov for more information about trich.
