The Texas Animal Health Commission (commission) proposes amendments to §38.1, concerning Definitions, and §38.3, concerning Infected Herds, in Chapter 38, which is entitled “Trichomoniasis”. The purpose of the amendments is to make changes to the Trichomoniasis (Trich) testing requirements.

The Trich organism causes abortion and extended calving seasons. Bulls will remain persistently infected and spread infection from cow to cow. Older bulls are typically the main reservoir of infection in a herd; this is because older bulls often have deeper preputial folds (crypts) creating a more favorable environment for Trich.

The Bovine Trich Working Group (TWG) had an annual review on April 23, 2015, to evaluate the effectiveness of current rules. The TWG discussed the program overview to date, the management of infected herds, entry requirements, and the need for possible revisions to the program.

The TWG recommended adding testing requirements for bulls located in adjacent pastures to property where Trich infected male or female cattle are or were located and this proposed amendment to §38.3 includes the TWG recommendations. Under the proposal, where any positive cattle are located on property that is fence line adjacent to bulls, those bulls on the adjacent property must be officially tested for Trich. The testing is required if the Trich infected cattle were located in fence line adjacent pastures within 30 days of the removal of the infected animal. The commission will provide written notification to the owner or caretaker of the bulls specifying the timeframe for testing. The commission may waive this testing requirement if the commission’s epidemiological investigation shows that testing is not required.

The TWG also recommended lowering the acceptable in-state virgin age from 24 months to 18 months to harmonize in-state change of ownership virgin rules with interstate entry rules for virgin bulls, so there is a proposed change to the definition of virgin bull in §38.1.

FISCAL NOTE

Ms. Larissa Schmidt, Director of Administration, Texas Animal Health Commission, has determined for the first five-year period the rules are in effect, there will be no significant additional fiscal implications for state or local government as a result of enforcing or administering the rule. An Economic Impact Statement (EIS) is required if the proposed rule has an adverse economic effect on small businesses. The purpose of the amendments is to determine whether or not an infected animal exists on property adjacent to property where Trich positive cattle were located, and to harmonize virgin bull definitions. The agency has evaluated the requirements and determined that there is not an adverse economic impact and, therefore, there is no need to do an EIS. Implementation of these rules poses no significant fiscal impact on small or micro-businesses, or to individuals.
PUBLIC BENEFIT NOTE

Ms. Schmidt has also determined that for each year of the first five years the rules are in effect, the public benefit anticipated as a result of enforcing the rules will be to ensure the testing and health status of exposed or affected cattle, which protects the livestock industry in this state.

LOCAL EMPLOYMENT IMPACT STATEMENT

In accordance with Texas Government Code §2001.022, this agency has determined that the proposed rules will not impact local economies and, therefore, did not file a request for a local employment impact statement with the Texas Workforce Commission.

TAKINGS ASSESSMENT

The agency has determined that the proposed governmental action will not affect private real property. The proposed amendments are an activity related to the handling of animals, including requirements for testing, movement, inspection, identification, reporting of disease, and treatment, in accordance with 4 TAC §59.7, and are, therefore, compliant with the Private Real Property Preservation Act in Government Code, Chapter 2007.

REQUEST FOR COMMENT

Comments regarding the proposal may be submitted to Amanda Bernhard, Texas Animal Health Commission, 2105 Kramer Lane, Austin, Texas 78758, by fax at (512) 719-0719 or by email at "comments@tahc.texas.gov".

STATUTORY AUTHORITY

The amendments are proposed under the following statutory authority as found in Chapter 161 of the Texas Agriculture Code. The commission is vested by statute, §161.041(a), with the requirement to protect all livestock, domestic animals, and domestic fowl from disease. The commission is authorized, through §161.041(b), to act to eradicate or control any disease or agent of transmission for any disease that affects livestock.

Pursuant to §161.048, entitled “Inspection of Shipment of Animals or Animal Products”, the commission may require testing, vaccination, or another epidemiologically sound procedure before or after animals are moved. An agent of the commission is entitled to stop and inspect a shipment of animals or animal products being transported in this state in order to determine if the shipment originated from a quarantined area or herd; or determine if the shipment presents a danger to the public health or livestock industry through insect infestation or through a communicable or noncommunicable disease.

Pursuant to §161.054, entitled “Regulation of Movement of Animals”, the commission, by rule, may regulate the movement of animals. The commission may restrict the intrastate movement of animals even though the movement of the animals is unrestricted in interstate or international commerce.
Pursuant to §161.061, entitled “Quarantines”, if the commission determines that a disease listed in §161.041 or an agent of transmission of one of those diseases exists in a place in this state among livestock, or that livestock are exposed to one of those diseases or an agency of transmission of one of those diseases, the commission shall establish a quarantine on the affected animals or on the affected place. The quarantine of an affected place may extend to any affected area, including a county, district, pasture, lot, ranch, farm, field, range, thoroughfare, building, stable, or stockyard pen. The commission may establish a quarantine to prohibit or regulate the movement of (1) any article or animal that the commission designates to be a carrier of a disease listed in §161.041 or a potential carrier of one of those diseases, if movement is not otherwise regulated or prohibited; and (2) an animal into an affected area, including a county district, pasture, lot, ranch, farm, field, range, thoroughfare, building, stable, or stockyard pen.

Pursuant to §161.046, entitled “Rules”, the commission may adopt rules as necessary for the administration and enforcement of this chapter.

No other statutes, articles or codes are affected by the proposal.

38.1. Definitions.

The following words and terms, when used in this chapter, shall have the defined meanings, unless the context clearly indicates otherwise:

1. Accredited Veterinarian--A licensed veterinarian who is approved to perform specified functions required by cooperative state-federal disease control and eradication programs pursuant to Title 9 of the Code of Federal Regulations, Parts 160 and 161.

2. Affected Herd--Any herd in which any cattle have been classified as *Trichomonas foetus* positive on an official test and which has not completed the requirements for elimination of the disease from the herd.

3. Cattle--All dairy and beef animals (genus Bos) and bison (genus Bison).

4. Certified Veterinarians--Veterinarians certified with, and approved by the commission to collect Trichomoniasis samples for official Trichomoniasis testing and to perform any other official function under the Trichomoniasis program.

6. Executive Director--The Executive Director of the Texas Animal Health Commission or his designee.

7. Exempt Cattle (from testing requirements)--Cattle that have been physically rendered incapable of intromission at a facility recognized by the commission.

8. Exposed Cattle--Cattle that are part of an affected herd or cattle that have been in contact with Trichomoniasis infected cattle.

9. Herd--
   (A) All cattle under common ownership or supervision or cattle owned by a spouse that are on one premise; or
   (B) All cattle under common ownership or supervision or cattle owned by a spouse on two or more premises that are geographically separated, but on which the cattle have been interchanged or where there has been contact among the cattle on the different premises. Contact between cattle on the different premises will be assumed unless the owner establishes otherwise and the
results of the epidemiological investigation are consistent with the lack of contact between premises; or
(C) All cattle on common premises, such as community pastures or grazing association units, but owned by different persons. Other cattle owned by the persons involved which are located on other premises are considered to be part of this herd unless the epidemiological investigation establishes that cattle from the affected herd have not had the opportunity for direct or indirect contact with cattle from that specific premises. Approved feedlots and approved pastures are not considered to be herds.
(10) Herd Test—An official test of all non-virgin bulls in a herd.
(11) Hold Order—A document restricting movement of a herd, unit, or individual animal pending the determination of disease status.
(12) Infected Cattle—Any cattle determined by an official test or diagnostic procedure to be infected with Trichomoniasis or diagnosed by a veterinarian as infected.
(13) Infected Herd—The non-virgin bulls in any herd in which any cattle have been determined by an official test or diagnostic procedure to be infected with Trichomoniasis or diagnosed by a veterinarian as being infected.
(14) Movement Permit—Authorization for movement of infected or exposed cattle from the farm or ranch of origin through marketing channels to slaughter or for movement of untested animals to a location where the animals will be held under hold order until testing has been accomplished.
(15) Movement Restrictions—A "Hold Order," "Quarantine," or other written document issued or ordered by the commission to restrict the movement of livestock or exotic livestock.
(16) Negative—Cattle that have been tested with official test procedures and found to be free from infection with Trichomoniasis.
(17) Official Identification/Officially Identified—The identification of livestock by means of an official identification device, official eartag, registration tattoo, or registration brand, or any other method approved by the commission and/or Administrator of APHIS that provides unique identification for each animal. Official identification includes USDA alpha-numeric metal eartags (silver bangs tags), 840 RFID tags, 840 bangle tags, official breed registry tattoos, and official breed registry individual animal brands.
(18) Official Trichomoniasis test—A test for bovine Trichomoniasis, approved by the commission, applied and reported by TVMDL or any other laboratory approved as an official laboratory by the commission. The test document is valid for 60 days, provided the bull is isolated from female cattle at all times, and may be transferred within that timeframe with an original signature of the consignor.
(19) Official Laboratory Pooled Trichomoniasis test samples—Up to five samples individually collected by a veterinarian and packaged and submitted to an official laboratory which can then pool the samples.
(20) Positive—Cattle that have been tested with official test procedures and found to be infected with Trichomoniasis.
(21) Quarantine—A written commission document or a verbal order followed by a written order restricting movement of animals because of the existence of or exposure to Trichomoniasis. The commission may establish a quarantine on the affected animals or on the affected place. The quarantine of an affected place may extend to any affected area, including a county, district, pasture, lot, ranch, farm, field, range, thoroughfare, building, stable, or stockyard pen. The commission may establish a quarantine to prohibit or regulate the movement of any article or
animal that the commission designates to be a carrier of Trichomoniasis and/or an animal into an affected area, including a county district, pasture, lot, ranch, farm, field, range, thoroughfare, building, stable, or stockyard pen.

(22) Test-Eligible Cattle--All sexually intact non-virgin male cattle and all sexually intact male cattle which have erupting or erupted permanent incisor teeth (or older), which are being sold, leased, gifted or exchanged in the state of Texas for breeding purposes.

(23) Trichomoniasis--A venereal disease of cattle caused by the organism *Tritrichomonas foetus*.

(24) TVMDL--The official laboratory for testing is the Texas A&M Veterinary Medical Diagnostic Laboratory.

(25) Virgin Bull--Sexually intact male cattle which have not serviced a cow and which are not more than 18-24 months of age as determined by the eruption presence of the two permanent central incisors in wear or birth date on breed registry papers certified by the breeder; or not more than 30 months of age and certified by both the breeder based on birth date and confirmed by his veterinarian that the bull facility is sufficient to prevent contact with female cattle. The certification by the breeder is valid for 60 days, provided the bull is isolated from female cattle at all times, and may be transferred within that timeframe with an original signature of the consignor.

38.3. Infected Herds.

(a) Bulls that have been determined to be infected by culture or by RT-PCR test and/or by confirmatory RT-PCR test shall be placed under hold order along with all other non-virgin bulls in the bull herd. Infected bulls must be isolated from all female cattle from the time of diagnosis until final disposition or as directed by the commission. Breeding bulls which have been disclosed as reactors may be retested provided: the owners, or their agents initiate a request to the TAHC Regional Director where the bull is located; that retests are conducted within 30 days after the date of the original test; test samples for retests are submitted to the TVMDL for testing; and the positive bull is held under quarantine along with all other exposed bulls on the premise. If they are retested, they must have two negative tests by RT-PCR to be released within 30 days of the initial test.

(b) Positive bulls may be moved directly to slaughter or to a livestock market for sale directly to slaughter. In order to move, the bulls shall be individually identified by official identification device on a movement permit authorized by the commission from the ranch to the market and from the market to the slaughter facility, or from the ranch directly to the slaughter facility. Movement to slaughter shall occur within 30 days from disclosure of positive test results (or confirmatory test results) or as directed by the commission.

(c) All bulls that are part of a herd in which one or more bulls have been found to be infected shall be placed under hold order in isolation away from female cattle until they have undergone at least two additional culture tests with negative results (not less than a total of three negative culture tests or two negative RT-PCR tests) within 60 days of the initial test unless handled in accordance with subsection (d) of this section. All bulls remaining in the herd from which an infected bull(s) has been identified must be tested two more times by culture or one more time by RT-PCR test. Any bull positive on the second or third test shall be classified as positive. All bulls negative to all three culture tests or both RT-PCR tests shall be classified as negative and could be released for breeding.

(d) Breeding bulls that are part of a quarantined herd or a herd that is under a hold order and tests
negative to the first official Trichomoniasis test may be maintained with the herd if the owner or caretaker of the bulls develops a Trichomoniasis herd control plan with a certified veterinarian. The Trichomoniasis herd control plan shall require all breeding bulls to be tested annually with an official Trichomoniasis test and include other best management practices to control, eliminate and prevent the spread Trichomoniasis. The Trichomoniasis herd control plan, unless otherwise approved or disapproved by the commission, expires three years from the date the plan is signed by the herd owner or caretaker and the authorized veterinarian. Breeding bulls that are part of a Trichomoniasis herd control plan that expires or that is disapproved must be tested for Trichomoniasis as required by subsection (c) of this section.

(e) When Trichomoniasis is diagnosed in female cattle or fetal tissue, all breeding bulls associated with the herd will be restricted under a Hold Order for testing in accordance with this section.

(f) If male or female cattle are found to be infected with Trichomoniasis, then bulls that are located or were located on property adjacent to the infected animal within 30 days from the date the infected animal was removed from such property shall be officially tested for Trichomoniasis. Such bulls shall be tested within a timeframe as determined by the commission. The commission shall provide written notification to the owner or caretaker of the bulls specifying the timeframe in which the bulls must be tested. The commission may waive this testing requirement if it is epidemiologically determined by the commission that testing is not required.
